NovaQC

NovaQC, NovaPACS' handy technologist workstation allows quality control of images, DICOM print, printing of patient CDs, administration functions, and access to archive and route managers.

NovaQC Features:

- The ability for technologists to view and manipulate data received from DICOM modalities
- 3-D / volume, 3-D / MIP, and MPR functions
- Supports pan and zoom, window/level, measurement and cine functions
- Supports mouse wheel scroll for slice-by-slice viewing
- DICOM receive, send, and query
- Create a compact disc (CD) that includes the images along with a full-featured viewer to provide to patients and referring physicians
- Display single or multiple slice images
- Print to any supported local and/or network paper printer
- Ability to print to a network attached DICOM-compatible printer
- Support viewing monochrome and color images
- Mechanisms for accessing and sorting exams
- Ability to add comments or annotations during the QC check
- Supports usage auditing
- Patient CD writer that supports query retrieve
- Ability to burn multiple exams
- Notifies user if the selected data cannot fit onto one CD
- Patient CD with full DICOM images
- DICOM viewing applications automatically launch on client's computer
- Patient CD can be written to an automated, multiple CD writer/labeler.
- True size printing
- Print priority
- Max density
- Variable border density
- Multi-format output
- Multi-film orientation

Why Choose NovaPACS?

Enterprise level, scalable, complete, fast, and effective, NovaPACS is everything you need in a PACS. It's also an easy way to go from film to digital, send and manage images over the hospital network and the web, and provide for all your radiology and hospital imaging needs. What's more, NovaPACS is remarkably affordable and financing can be tailored to fit your hospital or imaging center requirements.
